

Syllabus

WHITMAN, ADMINISTRATOR OF ENVIRONMENTAL
PROTECTION AGENCY, ET AL. *v.* AMERICAN
TRUCKING ASSOCIATIONS, INC., ET AL.CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR
THE DISTRICT OF COLUMBIA CIRCUIT

No. 99–1257. Argued November 7, 2000—Decided February 27, 2001*

Section 109(a) of the Clean Air Act (CAA) requires the Environmental Protection Agency (EPA) Administrator to promulgate national ambient air quality standards (NAAQS) for each air pollutant for which “air quality criteria” have been issued under § 108. Pursuant to § 109(d)(1), the Administrator in 1997 revised the ozone and particulate matter NAAQS. Respondents in No. 99–1257, private parties and several States (hereinafter respondents), challenged the revised NAAQS on several grounds. The District of Columbia Circuit found that, under the Administrator’s interpretation, § 109(b)(1)—which instructs the EPA to set standards “the attainment and maintenance of which . . . are requisite to protect the public health” with “an adequate margin of safety”—delegated legislative power to the Administrator in contravention of the Federal Constitution, and it remanded the NAAQS to the EPA. The Court of Appeals also declined to depart from its rule that the EPA may not consider implementation costs in setting the NAAQS. And it held that, although certain implementation provisions for the ozone NAAQS contained in Part D, Subpart 2, of Title I of the CAA did not prevent the EPA from revising the ozone standard and designating certain areas as “nonattainment areas,” those provisions, rather than more general provisions contained in Subpart 1, constrained the implementation of the new ozone NAAQS. The court rejected the EPA’s argument that it lacked jurisdiction to reach the implementation question because there had been no “final” implementation action.

Held:

1. Section 109(b) does not permit the Administrator to consider implementation costs in setting NAAQS. Because the CAA often expressly grants the EPA the authority to consider implementation costs, a provision for costs will not be inferred from its ambiguous provisions. *Union Elec. Co. v. EPA*, 427 U. S. 246, 257, and n. 5. And since

*Together with No. 99–1426, *American Trucking Associations, Inc., et al. v. Whitman, Administrator of Environmental Protection Agency, et al.*, also on certiorari to the same court.

Syllabus

§ 109(b)(1) is the engine that drives nearly all of Title I of the CAA, the textual commitment of costs must be clear; Congress does not alter a regulatory scheme's fundamental details in vague terms or ancillary provisions, see *MCI Telecommunications Corp. v. American Telephone & Telegraph Co.*, 512 U. S. 218, 231. Respondents' arguments founder upon this principle. It is implausible that § 109(b)(1)'s modest words "adequate margin" and "requisite" give the EPA the power to determine whether implementation costs should moderate national air quality standards. Cf. *ibid.* And the cost factor is *both* so indirectly related to public health *and* so full of potential for canceling the conclusions drawn from direct health effects that it would have been expressly mentioned in §§ 108 and 109 had Congress meant it to be considered. Other CAA provisions, which do require cost data, have no bearing upon whether costs are to be taken into account in setting the NAAQS. Because the text of § 109(b)(1) in its context is clear, the canon of construing texts to avoid serious constitutional problems is not applicable. See, e. g., *Miller v. French*, 530 U. S. 327, 341. Pp. 464–471.

2. Section 109(b)(1) does not delegate legislative power to the EPA. When conferring decisionmaking authority upon agencies, Congress must lay down an intelligible principle to which the person or body authorized to act is directed to conform. *J. W. Hampton, Jr., & Co. v. United States*, 276 U. S. 394, 409. An agency cannot cure an unlawful delegation of legislative power by adopting in its discretion a limiting construction of the statute. The limits that § 109(b)(1) imposes on the EPA's discretion are strikingly similar to the ones approved in, e. g., *Touby v. United States*, 500 U. S. 160, and the scope of discretion that § 109(b)(1) allows is well within the outer limits of the Court's non-delegation precedents, see, e. g., *Panama Refining Co. v. Ryan*, 293 U. S. 388. Statutes need not provide a determinate criterion for saying how much of a regulated harm is too much to avoid delegating legislative power. Pp. 472–476.

3. The Court of Appeals had jurisdiction to consider the implementation issue under § 307 of the CAA. The implementation policy constitutes final agency action under § 307 because it marked the consummation of the EPA's decisionmaking process, see *Bennett v. Spear*, 520 U. S. 154. The decision is also ripe for review. The question is purely one of statutory interpretation that would not benefit from further factual development, see *Ohio Forestry Assn., Inc. v. Sierra Club*, 523 U. S. 726, 733; review will not interfere with further administrative development; and the hardship on respondent States in developing state implementation plans satisfies the CAA's special judicial-review provision permitting preenforcement review, see *id.*, at 737.

Syllabus

The implementation issue was also fairly included within the challenges to the final ozone rule that were before the Court of Appeals, which all parties agree is final agency action ripe for review. Pp. 476–480.

4. The implementation policy is unlawful. Under *Chevron U. S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U. S. 837, if the statute resolves the question whether Subpart 1 or Subpart 2 applies to revised ozone NAAQS, that ends the matter; but if the statute is ambiguous, the Court must defer to a reasonable agency interpretation. Here, the statute is ambiguous concerning the interaction between Subpart 1 and Subpart 2, but the Court cannot defer to the EPA's interpretation, which would render Subpart 2's carefully designed restrictions on EPA discretion nugatory once a new ozone NAAQS has been promulgated. The principal distinction between the subparts is that Subpart 2 eliminates regulatory discretion allowed by Subpart 1. The EPA may not construe the statute in a way that completely nullifies textually applicable provisions meant to limit its discretion. In addition, although Subpart 2 was obviously written to govern implementation for some time into the future, nothing in the EPA's interpretation would have prevented the agency from aborting the subpart the day after it was enacted. It is left to the EPA to develop a reasonable interpretation of the nonattainment implementation provisions insofar as they apply to revised ozone NAAQS. Pp. 481–486.

175 F. 3d 1027 and 195 F. 3d 4, affirmed in part, reversed in part, and remanded.

SCALIA, J., delivered the opinion of the Court, Parts I and IV of which were unanimous, Part II of which was joined by REHNQUIST, C. J., and STEVENS, O'CONNOR, KENNEDY, SOUTER, THOMAS, and GINSBURG, JJ., and Part III of which was joined by REHNQUIST, C. J., and O'CONNOR, KENNEDY, THOMAS, GINSBURG, and BREYER, JJ. THOMAS, J., filed a concurring opinion, *post*, p. 486. STEVENS, J., filed an opinion concurring in part and concurring in the judgment, in which SOUTER, J., joined, *post*, p. 487. BREYER, J., filed an opinion concurring in part and concurring in the judgment, *post*, p. 490.

Solicitor General Waxman argued the cause for petitioners in No. 99–1257 and federal respondents in No. 99–1426. With him on the briefs were *Assistant Attorney General Schiffer*, *Deputy Solicitor General Wallace*, *Jeffrey P. Minear*, *Christopher S. Vaden*, *David J. Kaplan*, *Mary F. Edgar*, *Gary S. Guzy*, *Gerald K. Gleason*, and *Michael L. Goo*.

Counsel

Edward W. Warren argued the cause for American Trucking Associations et al., respondents in No. 99-1257 and cross-petitioners in No. 99-1426. With him on the briefs were *Robert R. Gasaway*, *Jeffrey B. Clark*, *Daryl Joseffer*, *Charles Fried*, *Robin S. Conrad*, *Beth L. Law*, *Robert S. Digges*, *Gary H. Baise*, *David M. Friedland*, *Erika Z. Jones*, *Timothy S. Bishop*, *Jan S. Amundson*, *Dimetria G. (Jim) Daskal*, *Douglas I. Greenhaus*, and *Chet M. Thompson*. *Judith L. French*, Assistant Attorney General of Ohio, argued the cause for respondents State of Ohio et al. in No. 99-1257. With her on the brief in No. 99-1257 and on the briefs for State of Ohio et al., respondents in support of cross-petitioners in No. 99-1426, were *Betty D. Montgomery*, Attorney General, *Edward B. Foley*, State Solicitor, *Elise W. Porter*, *Frank J. Reed, Jr.*, and *James G. Tassie*, Assistant Attorneys General, *Mark J. Rudolph*, *Jennifer M. Granholm*, Attorney General of Michigan, *Thomas Casey*, Solicitor General, and *Alan F. Hoffman* and *Pamela J. Stevenson*, Assistant Attorneys General. *Thomas F. Reilly*, Attorney General of Massachusetts, *Edward G. Bohlen*, Assistant Attorney General, *Lisa Heinzerling*, *John J. Farmer*, Attorney General of New Jersey, and *Howard L. Geduldig* and *John R. Renella*, Deputy Attorneys General, filed briefs for the Commonwealth of Massachusetts et al., respondents in support of petitioners in No. 99-1257 and respondents in No. 99-1426. *Howard I. Fox* filed briefs for the American Lung Association, respondent in support of petitioners in No. 99-1257 and respondent in No. 99-1426. *Henry V. Nickel*, *F. Cox*, and *Mark A. Perry*; for the Association of American Physicians & Surgeons et al. by *Erik S. Jaffe*; for the Clean Air Trust et al. by *Christopher H. Schroeder*; for the Lincoln Institute for Research and Education et al. by *William J. Olson*, *John S. Miles*, *Herbert W. Titus*, and *Lawrence J. Straw, Jr.*; for the Manufacturers Alliance/MAPI Inc. et al. by *David Schoenbrod* and *Marci A. Hamilton*; for the United States Public Interest Research Group

Opinion of the Court

JUSTICE SCALIA delivered the opinion of the Court.

These cases present the following questions: (1) Whether § 109(b)(1) of the Clean Air Act (CAA) delegates legislative power to the Administrator of the Environmental Protection Agency (EPA). (2) Whether the Administrator may consider the costs of implementation in setting national ambient air quality standards (NAAQS) under § 109(b)(1). (3) Whether the Court of Appeals had jurisdiction to review the EPA's interpretation of Part D of Title I of the CAA, 42 U. S. C. §§ 7501–7515, with respect to implementing the revised ozone NAAQS. (4) If so, whether the EPA's interpretation of that part was permissible.

I

Section 109(a) of the CAA, as added, 84 Stat. 1679, and amended, 42 U. S. C. § 7409(a), requires the Administrator of the EPA to promulgate NAAQS for each air pollutant for which “air quality criteria” have been issued under § 108, 42 U. S. C. § 7408. Once a NAAQS has been promulgated, the Administrator must review the standard (and the criteria

Education Fund by *James Keith Weeks* and *David M. Driesen*; and for Senator James H. Inhofe et al. by *Paul Rosenzweig*.

Briefs of *amici curiae* were filed for the AEI-Brookings Joint Center for Regulatory Studies et al. by *Robert E. Litan*; for Alcan Aluminum Corp. by *Lawrence A. Salibra II*; for Environmental Defense et al. by *Richard L. Revesz* and *Ann Brewster Weeks*; for General Electric Co. by *Laurence H. Tribe*, *Jonathan S. Massey*, *Thomas C. Goldstein*, *Benjamin W. Heineman, Jr.*, *Brackett B. Denniston III*, and *Matthew Tanzer*; for the Institute for Justice et al. by *William H. Phillips*, *Alan Charles Raul*, *Stephen B. Kinnaird*, *Lloyd N. Cutler*, and *C. Boyden Gray*; and for Gary E. Marchant et al. by *Cary Coglianese*.

Opinion of the Court

on which it is based) “at five-year intervals” and make “such revisions . . . as may be appropriate.” CAA § 109(d)(1), 42 U. S. C. § 7409(d)(1). These cases arose when, on July 18, 1997, the Administrator revised the NAAQS for particulate matter and ozone. See NAAQS for Particulate Matter, 62 Fed. Reg. 38652 (codified in 40 CFR § 50.7 (1999)); NAAQS for Ozone, *id.*, at 38856 (codified in 40 CFR §§ 50.9, 50.10 (1999)). American Trucking Associations, Inc., and its co-respondents in No. 99–1257—which include, in addition to other private companies, the States of Michigan, Ohio, and West Virginia—challenged the new standards in the Court of Appeals for the District of Columbia Circuit, pursuant to 42 U. S. C. § 7607(b)(1).

The District of Columbia Circuit accepted some of the challenges and rejected others. It agreed with the No. 99–1257 respondents (hereinafter respondents) that § 109(b)(1) delegated legislative power to the Administrator in contravention of the United States Constitution, Art. I, § 1, because it found that the EPA had interpreted the statute to provide no “intelligible principle” to guide the agency’s exercise of authority. *American Trucking Assns., Inc. v. EPA*, 175 F. 3d 1027, 1034 (1999). The court thought, however, that the EPA could perhaps avoid the unconstitutional delegation by adopting a restrictive construction of § 109(b)(1), so instead of declaring the section unconstitutional the court remanded the NAAQS to the agency. *Id.*, at 1038. (On this delegation point, Judge Tatel dissented, finding the statute constitutional as written. *Id.*, at 1057.) On the second issue that the Court of Appeals addressed, it unanimously rejected respondents’ argument that the court should depart from the rule of *Lead Industries Assn., Inc. v. EPA*, 647 F. 2d 1130, 1148 (CA DC 1980), that the EPA may not consider the cost of implementing a NAAQS in setting the initial standard. It also rejected respondents’ argument that the implementation provisions for ozone found in Part D, Subpart 2, of Title I of the CAA, 42 U. S. C. §§ 7511–7511f, were

Opinion of the Court

so tied to the existing ozone standard that the EPA lacked the power to revise the standard. The court held that although Subpart 2 constrained the agency's method of implementing the new standard, 175 F. 3d, at 1050, it did not prevent the EPA from revising the standard and designating areas of the country as "nonattainment areas," see 42 U. S. C. § 7407(d)(1), by reference to it, 175 F. 3d, at 1047–1048. On the EPA's petition for rehearing, the panel adhered to its position on these points, and unanimously rejected the EPA's new argument that the court lacked jurisdiction to reach the implementation question because there had been no "final" implementation action. *American Trucking Assns., Inc. v. EPA*, 195 F. 3d 4 (CADDC 1999). The Court of Appeals denied the EPA's suggestion for rehearing en banc, with five judges dissenting. *Id.*, at 13.

The Administrator and the EPA petitioned this Court for review of the first, third, and fourth questions described in the first paragraph of this opinion. Respondents conditionally cross-petitioned for review of the second question. We granted certiorari on both petitions, 529 U. S. 1129 (2000); 530 U. S. 1202 (2000), and scheduled the cases for argument in tandem. We have now consolidated the cases for purposes of decision.

II

In *Lead Industries Assn., Inc. v. EPA*, *supra*, at 1148, the District of Columbia Circuit held that "economic considerations [may] play no part in the promulgation of ambient air quality standards under Section 109" of the CAA. In the present cases, the court adhered to that holding, 175 F. 3d, at 1040–1041, as it had done on many other occasions. See, e. g., *American Lung Assn. v. EPA*, 134 F. 3d 388, 389 (1998); *NRDC v. Administrator, EPA*, 902 F. 2d 962, 973 (1990), vacated in part on other grounds, *NRDC v. EPA*, 921 F. 2d 326 (CADDC 1991); *American Petroleum Institute v. Costle*, 665 F. 2d 1176, 1185 (1981). Respondents argue that these

Opinion of the Court

decisions are incorrect. We disagree; and since the first step in assessing whether a statute delegates legislative power is to determine what authority the statute confers, we address that issue of interpretation first and reach respondents' constitutional arguments in Part III, *infra*.

Section 109(b)(1) instructs the EPA to set primary ambient air quality standards “the attainment and maintenance of which . . . are requisite to protect the public health” with “an adequate margin of safety.” 42 U. S. C. § 7409(b)(1). Were it not for the hundreds of pages of briefing respondents have submitted on the issue, one would have thought it fairly clear that this text does not permit the EPA to consider costs in setting the standards. The language, as one scholar has noted, “is absolute.” D. Currie, *Air Pollution: Federal Law and Analysis* 4–15 (1981). The EPA, “based on” the information about health effects contained in the technical “criteria” documents compiled under § 108(a)(2), 42 U. S. C. § 7408(a)(2), is to identify the maximum airborne concentration of a pollutant that the public health can tolerate, decrease the concentration to provide an “adequate” margin of safety, and set the standard at that level. Nowhere are the costs of achieving such a standard made part of that initial calculation.

Against this most natural of readings, respondents make a lengthy, spirited, but ultimately unsuccessful attack. They begin with the object of § 109(b)(1)'s focus, the “public health.” When the term first appeared in federal clean air legislation—in the Act of July 14, 1955 (1955 Act), 69 Stat. 322, which expressed “recognition of the dangers to the public health” from air pollution—its ordinary meaning was “[t]he health of the community.” Webster's New International Dictionary 2005 (2d ed. 1950). Respondents argue, however, that § 109(b)(1), as added by the Clean Air Amendments of 1970, 84 Stat. 1676, meant to use the term's secondary meaning: “[t]he ways and means of conserving the health

Opinion of the Court

of the members of a community, as by preventive medicine, organized care of the sick, etc.” *Ibid.* Words that can have more than one meaning are given content, however, by their surroundings, *FDA v. Brown & Williamson Tobacco Corp.*, 529 U. S. 120, 132–133 (2000); *Jones v. United States*, 527 U. S. 373, 389 (1999), and in the context of § 109(b)(1) this second definition makes no sense. Congress could not have meant to instruct the Administrator to set NAAQS at a level “requisite to protect” “the art and science dealing with the protection and improvement of community health.” Webster’s Third New International Dictionary 1836 (1981). We therefore revert to the primary definition of the term: the health of the public.

Even so, respondents argue, many more factors than air pollution affect public health. In particular, the economic cost of implementing a very stringent standard might produce health losses sufficient to offset the health gains achieved in cleaning the air—for example, by closing down whole industries and thereby impoverishing the workers and consumers dependent upon those industries. That is unquestionably true, and Congress was unquestionably aware of it. Thus, Congress had commissioned in the Air Quality Act of 1967 (1967 Act) “a detailed estimate of the cost of carrying out the provisions of this Act; a comprehensive study of the cost of program implementation by affected units of government; and a comprehensive study of the economic impact of air quality standards on the Nation’s industries, communities, and other contributing sources of pollution.” § 2, 81 Stat. 505. The 1970 Congress, armed with the results of this study, see *The Cost of Clean Air*, S. Doc. No. 91–40 (1969) (publishing the results of the study), not only anticipated that compliance costs could injure the public health, but provided for that precise exigency. Section 110(f)(1) of the CAA permitted the Administrator to waive the compliance deadline for stationary sources if, *inter*

Opinion of the Court

alia, sufficient control measures were simply unavailable and “the continued operation of such sources is *essential . . . to the public health or welfare.*” 84 Stat. 1683 (emphasis added). Other provisions explicitly permitted or required economic costs to be taken into account in implementing the air quality standards. Section 111(b)(1)(B), for example, commanded the Administrator to set “standards of performance” for certain new sources of emissions that as specified in § 111(a)(1) were to “reflec[t] the degree of emission limitation achievable through the application of the best system of emission reduction which (taking into account the cost of achieving such reduction) the Administrator determines has been adequately demonstrated.” Section 202(a)(2) prescribed that emissions standards for automobiles could take effect only “after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.” 84 Stat. 1690. See also § 202(b)(5)(C) (similar limitation for interim standards); § 211(c)(2) (similar limitation for fuel additives); § 231(b) (similar limitation for implementation of aircraft emission standards). Subsequent amendments to the CAA have added many more provisions directing, in explicit language, that the Administrator consider costs in performing various duties. See, *e. g.*, 42 U. S. C. § 7545(k)(1) (reformulate gasoline to “require the greatest reduction in emissions . . . taking into consideration the cost of achieving such emissions reductions”); § 7547(a)(3) (emission reduction for nonroad vehicles to be set “giving appropriate consideration to the cost” of the standards). We have therefore refused to find implicit in ambiguous sections of the CAA an authorization to consider costs that has elsewhere, and so often, been expressly granted. See *Union Elec. Co. v. EPA*, 427 U. S. 246, 257, and n. 5 (1976). Cf. *General Motors Corp. v. United States*, 496 U. S. 530, 538, 541 (1990)

Opinion of the Court

(refusing to infer in certain provisions of the CAA deadlines and enforcement limitations that had been expressly imposed elsewhere).

Accordingly, to prevail in their present challenge, respondents must show a textual commitment of authority to the EPA to consider costs in setting NAAQS under § 109(b)(1). And because § 109(b)(1) and the NAAQS for which it provides are the engine that drives nearly all of Title I of the CAA, 42 U. S. C. §§ 7401–7515, that textual commitment must be a clear one. Congress, we have held, does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions—it does not, one might say, hide elephants in mouseholes. See *MCI Telecommunications Corp. v. American Telephone & Telegraph Co.*, 512 U. S. 218, 231 (1994); *FDA v. Brown & Williamson Tobacco Corp.*, *supra*, at 159–160. Respondents’ textual arguments ultimately founder upon this principle.

Their first claim is that § 109(b)(1)’s terms “adequate margin” and “requisite” leave room to pad health effects with cost concerns. Just as we found it “highly unlikely that Congress would leave the determination of whether an industry will be entirely, or even substantially, rate-regulated to agency discretion—and even more unlikely that it would achieve that through such a subtle device as permission to ‘modify’ rate-filing requirements,” *MCI Telecommunications Corp. v. American Telephone & Telegraph Co.*, *supra*, at 231, so also we find it implausible that Congress would give to the EPA through these modest words the power to determine whether implementation costs should moderate national air quality standards. Accord, *Christensen v. Harris County*, 529 U. S. 576, 590, n. (2000) (SCALIA, J., concurring in part and concurring in judgment) (“The implausibility of Congress’s leaving a highly significant issue unaddressed (and thus ‘delegating’ its resolution to the administering agency) is assuredly one of the factors

Opinion of the Court

to be considered in determining whether there is ambiguity” (emphasis deleted)).¹

The same defect inheres in respondents’ next two arguments: that while the Administrator’s judgment about what is requisite to protect the public health must be “based on [the] criteria” documents developed under §108(a)(2), see §109(b)(1), it need not be based *solely* on those criteria; and that those criteria themselves, while they must include “effects on public health or welfare which may be expected from the presence of such pollutant in the ambient air,” are not necessarily *limited* to those effects. Even if we were to concede those premises, we still would not conclude that one of the unenumerated factors that the agency can consider in developing and applying the criteria is cost of implementation. That factor is *both* so indirectly related to public health *and* so full of potential for canceling the conclusions drawn from direct health effects that it would surely have been expressly mentioned in §§108 and 109 had Congress meant it to be considered. Yet while those provisions describe in detail how the health effects of pollutants in the ambient air are to be calculated and given effect, see §108(a)(2), they say not a word about costs.

Respondents point, finally, to a number of provisions in the CAA that *do* require attainment cost data to be generated. Section 108(b)(1), for example, instructs the Administrator to “issue to the States,” simultaneously with the criteria documents, “information on air pollution control techniques, which information shall include data relating to the cost of installation and operation.” 42 U. S. C. §7408(b)(1). And

¹ None of the sections of the CAA in which the District of Columbia Circuit has found authority for the EPA to consider costs shares §109(b)(1)’s prominence in the overall statutory scheme. See, e. g., *Michigan v. EPA*, 213 F. 3d 663, 678–679 (CADC 2000); *George E. Warren Corp. v. EPA*, 159 F. 3d 616, 623–624 (CADC 1998); *Natural Resources Defense Council, Inc. v. EPA*, 824 F. 2d 1146, 1154–1163 (CADC 1987) (en banc).

Opinion of the Court

§ 109(d)(2)(C)(iv) requires the Clean Air Scientific Advisory Committee to “advise the Administrator of any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance” of NAAQS.² 42 U.S.C. § 7409(d)(2)(C)(iv). Respondents argue that these provisions make no sense unless costs are to be considered in setting the NAAQS. That is not so. These provisions enable the Administrator to assist the States in carrying out their statutory role as primary *implementers* of the NAAQS. It is to the States that the CAA assigns initial and primary responsibility for deciding what emissions reductions will be required from which sources. See 42 U.S.C. §§ 7407(a), 7410 (giving States the duty of developing implementation plans). It would be impossible to perform that task intelligently without considering which abatement technologies are most efficient, and most economically feasible—which is why we have said that “the most important forum for consideration of claims of economic and technological infeasibility is before the state agency formulating the implementation plan,” *Union Elec. Co. v. EPA*, 427 U.S., at 266. Thus, federal clean air legislation has, from the very beginning, directed federal agencies to develop and transmit implementation data, including cost data, to the States. See 1955 Act,

² Respondents contend that this advice is required to be included in the NAAQS rulemaking record—which, if true, would suggest that it was relevant to the standard-setting process. But the provision respondents cite for their contention, 42 U.S.C. § 7607(d)(3), requires only that “*pertinent* findings, recommendations, and comments by the Scientific Review Committee” be included. The Committee’s advice concerning certain aspects of “adverse public health . . . effects” from various attainment strategies is unquestionably pertinent; but to say that Committee-generated cost data are pertinent is to beg the question. Likewise, while “all written comments” must be placed in the docket, § 7607(d)(4)(B)(i), the EPA need respond only to the “significant” ones, § 7407(d)(6)(B); comments regarding cost data are not significant if cost data are irrelevant.

Opinion of the Court

§ 2(b), 69 Stat. 322; Clean Air Act of 1963, amending §§ 3(a), (b) of the CAA, 77 Stat. 394; 1967 Act, §§ 103(a)–(d), 104, 107(c), 81 Stat. 486–488. That Congress chose to carry forward this research program to assist States in choosing the means through which they would implement the standards is perfectly sensible, and has no bearing upon whether cost considerations are to be taken into account in formulating the standards.³

It should be clear from what we have said that the canon requiring texts to be so construed as to avoid serious constitutional problems has no application here. No matter how severe the constitutional doubt, courts may choose only between reasonably available interpretations of a text. See, e. g., *Miller v. French*, 530 U. S. 327, 341 (2000); *Pennsylvania Dept. of Corrections v. Yeskey*, 524 U. S. 206, 212 (1998). The text of § 109(b), interpreted in its statutory and historical context and with appreciation for its importance to the CAA as a whole, unambiguously bars cost considerations from the NAAQS-setting process, and thus ends the matter for us as well as the EPA.⁴ We therefore affirm the judgment of the Court of Appeals on this point.

³ Respondents scarcely mention in their arguments the *secondary* NAAQS required by § 109(b)(2), 42 U. S. C. § 7409(b)(2). For many of the same reasons described in the body of the opinion, as well as the text of § 109(b)(2), which instructs the EPA to set the standards at a level “requisite to protect the public welfare from any known or anticipated adverse effects *associated with the presence of such air pollutant in the ambient air*” (emphasis added), we conclude that the EPA may not consider implementation costs in setting the secondary NAAQS.

⁴ Respondents’ speculation that the EPA is secretly considering the costs of attainment without telling anyone is irrelevant to our interpretive inquiry. If such an allegation could be proved, it would be grounds for vacating the NAAQS, because the Administrator had not followed the law. See, e. g., *Chevron U. S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U. S. 837, 842–843 (1984); *Atlantic Mut. Ins. Co. v. Commissioner*, 523 U. S. 382, 387 (1998). It would not, however, be grounds for this Court’s changing the law.

Opinion of the Court

III

Section 109(b)(1) of the CAA instructs the EPA to set “ambient air quality standards the attainment and maintenance of which in the judgment of the Administrator, based on [the] criteria [documents of §108] and allowing an adequate margin of safety, are requisite to protect the public health.” 42 U.S.C. §7409(b)(1). The Court of Appeals held that this section as interpreted by the Administrator did not provide an “intelligible principle” to guide the EPA’s exercise of authority in setting NAAQS. “[The] EPA,” it said, “lack[ed] any determinate criteria for drawing lines. It has failed to state intelligibly how much is too much.” 175 F.3d, at 1034. The court hence found that the EPA’s interpretation (but not the statute itself) violated the non-delegation doctrine. *Id.*, at 1038. We disagree.

In a delegation challenge, the constitutional question is whether the statute has delegated legislative power to the agency. Article I, §1, of the Constitution vests “[a]ll legislative Powers herein granted . . . in a Congress of the United States.” This text permits no delegation of those powers, *Loving v. United States*, 517 U.S. 748, 771 (1996); see *id.*, at 776–777 (SCALIA, J., concurring in part and concurring in judgment), and so we repeatedly have said that when Congress confers decisionmaking authority upon agencies Congress must “lay down by legislative act an intelligible principle to which the person or body authorized to [act] is directed to conform.” *J. W. Hampton, Jr., & Co. v. United States*, 276 U.S. 394, 409 (1928). We have never suggested that an agency can cure an unlawful delegation of legislative power by adopting in its discretion a limiting construction of the statute. Both *Fahey v. Mallonee*, 332 U.S. 245, 252–253 (1947), and *Lichter v. United States*, 334 U.S. 742, 783 (1948), mention agency regulations in the course of their nondelegation discussions, but *Lichter* did so because a subsequent Congress had incorporated the regulations into a revised version of the statute, *ibid.*, and *Fahey* because the custom-

Opinion of the Court

ary practices in the area, implicitly incorporated into the statute, were reflected in the regulations, 332 U. S., at 250. The idea that an agency can cure an unconstitutionally standardless delegation of power by declining to exercise some of that power seems to us internally contradictory. The very choice of which portion of the power to exercise—that is to say, the prescription of the standard that Congress had omitted—would *itself* be an exercise of the forbidden legislative authority. Whether the statute delegates legislative power is a question for the courts, and an agency’s voluntary self-denial has no bearing upon the answer.

We agree with the Solicitor General that the text of § 109(b)(1) of the CAA at a minimum requires that “[f]or a discrete set of pollutants and based on published air quality criteria that reflect the latest scientific knowledge, [the] EPA must establish uniform national standards at a level that is requisite to protect public health from the adverse effects of the pollutant in the ambient air.” Tr. of Oral Arg. in No. 99–1257, p. 5. Requisite, in turn, “mean[s] sufficient, but not more than necessary.” *Id.*, at 7. These limits on the EPA’s discretion are strikingly similar to the ones we approved in *Touby v. United States*, 500 U. S. 160 (1991), which permitted the Attorney General to designate a drug as a controlled substance for purposes of criminal drug enforcement if doing so was “‘necessary to avoid an imminent hazard to the public safety.’” *Id.*, at 163. They also resemble the Occupational Safety and Health Act of 1970 provision requiring the agency to “‘set the standard which most adequately assures, to the extent feasible, on the basis of the best available evidence, that no employee will suffer any impairment of health’”—which the Court upheld in *Industrial Union Dept., AFL–CIO v. American Petroleum Institute*, 448 U. S. 607, 646 (1980), and which even then-JUSTICE REHNQUIST, who alone in that case thought the statute violated the nondelegation doctrine, see *id.*, at 671 (opinion concurring in judgment), would have upheld if, like the statute

Opinion of the Court

here, it did not permit economic costs to be considered. See *American Textile Mfrs. Institute, Inc. v. Donovan*, 452 U. S. 490, 545 (1981) (REHNQUIST, J., dissenting).

The scope of discretion § 109(b)(1) allows is in fact well within the outer limits of our nondelegation precedents. In the history of the Court we have found the requisite “intelligible principle” lacking in only two statutes, one of which provided literally no guidance for the exercise of discretion, and the other of which conferred authority to regulate the entire economy on the basis of no more precise a standard than stimulating the economy by assuring “fair competition.” See *Panama Refining Co. v. Ryan*, 293 U. S. 388 (1935); *A. L. A. Schechter Poultry Corp. v. United States*, 295 U. S. 495 (1935). We have, on the other hand, upheld the validity of § 11(b)(2) of the Public Utility Holding Company Act of 1935, 49 Stat. 821, which gave the Securities and Exchange Commission authority to modify the structure of holding company systems so as to ensure that they are not “unduly or unnecessarily complicate[d]” and do not “unfairly or inequitably distribute voting power among security holders.” *American Power & Light Co. v. SEC*, 329 U. S. 90, 104 (1946). We have approved the wartime conferral of agency power to fix the prices of commodities at a level that “will be generally fair and equitable and will effectuate the [in some respects conflicting] purposes of th[e] Act.” *Yakus v. United States*, 321 U. S. 414, 420, 423–426 (1944). And we have found an “intelligible principle” in various statutes authorizing regulation in the “public interest.” See, e. g., *National Broadcasting Co. v. United States*, 319 U. S. 190, 225–226 (1943) (Federal Communications Commission’s power to regulate airwaves); *New York Central Securities Corp. v. United States*, 287 U. S. 12, 24–25 (1932) (Interstate Commerce Commission’s power to approve railroad consolidations). In short, we have “almost never felt qualified to second-guess Congress regarding the permissible degree of policy judgment that can be left to those executing or apply-

Opinion of the Court

ing the law.” *Mistretta v. United States*, 488 U. S. 361, 416 (1989) (SCALIA, J., dissenting); see *id.*, at 373 (majority opinion).

It is true enough that the degree of agency discretion that is acceptable varies according to the scope of the power congressionally conferred. See *Loving v. United States*, 517 U. S., at 772–773; *United States v. Mazurie*, 419 U. S. 544, 556–557 (1975). While Congress need not provide any direction to the EPA regarding the manner in which it is to define “country elevators,” which are to be exempt from new-stationary-source regulations governing grain elevators, see 42 U. S. C. § 7411(i), it must provide substantial guidance on setting air standards that affect the entire national economy. But even in sweeping regulatory schemes we have never demanded, as the Court of Appeals did here, that statutes provide a “determinate criterion” for saying “how much [of the regulated harm] is too much.” 175 F. 3d, at 1034. In *Touby*, for example, we did not require the statute to decree how “imminent” was too imminent, or how “necessary” was necessary enough, or even—most relevant here—how “hazardous” was too hazardous. 500 U. S., at 165–167. Similarly, the statute at issue in *Lichter* authorized agencies to recoup “excess profits” paid under wartime Government contracts, yet we did not insist that Congress specify how much profit was too much. 334 U. S., at 783–786. It is therefore not conclusive for delegation purposes that, as respondents argue, ozone and particulate matter are “nonthreshold” pollutants that inflict a continuum of adverse health effects at any airborne concentration greater than zero, and hence require the EPA to make judgments of degree. “[A] certain degree of discretion, and thus of lawmaking, inheres in most executive or judicial action.” *Mistretta v. United States*, *supra*, at 417 (SCALIA, J., dissenting) (emphasis deleted); see 488 U. S., at 378–379 (majority opinion). Section 109(b)(1) of the CAA, which to repeat we interpret as requiring the EPA to set air quality standards at the level that is “requi-

Opinion of the Court

site”—that is, not lower or higher than is necessary—to protect the public health with an adequate margin of safety, fits comfortably within the scope of discretion permitted by our precedent.

We therefore reverse the judgment of the Court of Appeals remanding for reinterpretation that would avoid a supposed delegation of legislative power. It will remain for the Court of Appeals—on the remand that we direct for other reasons—to dispose of any other preserved challenge to the NAAQS under the judicial-review provisions contained in 42 U. S. C. § 7607(d)(9).

IV

The final two issues on which we granted certiorari concern the EPA’s authority to implement the revised ozone NAAQS in areas whose ozone levels currently exceed the maximum level permitted by that standard. The CAA designates such areas “nonattainment,” § 107(d)(1), 42 U. S. C. § 7407(d)(1); see also Pub. L. 105–178, § 6103, 112 Stat. 465 (setting timeline for new ozone designations), and it exposes them to additional restrictions over and above the implementation requirements imposed generally by § 110 of the CAA. These additional restrictions are found in the five substantive subparts of Part D of Title I, 42 U. S. C. §§ 7501–7515. Subpart 1, §§ 7501–7509a, contains general nonattainment regulations that pertain to every pollutant for which a NAAQS exists. Subparts 2 through 5, §§ 7511–7514a, contain rules tailored to specific individual pollutants. Subpart 2, added by the Clean Air Act Amendments of 1990, § 103, 104 Stat. 2423, addresses ozone. 42 U. S. C. §§ 7511–7511f. The dispute before us here, in a nutshell, is whether Subpart 1 alone (as the agency determined), or rather Subpart 2 or some combination of Subparts 1 and 2, controls the implementation of the revised ozone NAAQS in nonattainment areas.

Opinion of the Court

A

The Administrator first urges, however, that we vacate the judgment of the Court of Appeals on this issue because it lacked jurisdiction to review the EPA's implementation policy. Section 307(b)(1) of the CAA, 42 U. S. C. § 7607(b)(1), gives the court jurisdiction over “any . . . nationally applicable regulations promulgated, or final action taken, by the Administrator,” but the EPA argues that its implementation policy was not agency “action,” was not “final” action, and is not ripe for review. We reject each of these three contentions.

At the same time the EPA proposed the revised ozone NAAQS in 1996, it also proposed an “interim implementation policy” for the NAAQS, see 61 Fed. Reg. 65752 (1996), that was to govern until the details of implementation could be put in final form through specific “rulemaking actions.” The preamble to this proposed policy declared that “the interim implementation policy . . . represent[s] EPA's preliminary views on these issues and, while it may include various statements that States must take certain actions, these statements are made pursuant to EPA's preliminary interpretations, and thus do not bind the States and public as a matter of law.” *Ibid.* If the EPA had done no more, we perhaps could accept its current claim that its action was not final. However, after the agency had accepted comments on its proposed policy, and on the same day that the final ozone NAAQS was promulgated, the White House published in the Federal Register what it titled a “Memorandum for the Administrator of the Environmental Protection Agency” that prescribed implementation procedures for the EPA to follow. 62 Fed. Reg. 38421 (1997). (For purposes of our analysis we shall assume that this memorandum was not itself action by the EPA.) The EPA supplemented this memorandum with an explanation of the implementation procedures, which it published in the explanatory preamble to its final ozone

Opinion of the Court

NAAQS under the heading, “Final decision on the primary standard.” *Id.*, at 38873. “In light of comments received regarding the interpretation proposed in the Interim Implementation Policy,” the EPA announced, it had “reconsidered that interpretation” and settled on a new one. *Ibid.* The provisions of “subpart 1 of part D of Title I of the Act” will immediately “apply to the implementation of the new 8-hour [ozone] standards.” *Ibid.*; see also *id.*, at 38885 (new standard to be implemented “simultaneously [with the old standard] . . . under the provisions of . . . subpart 1”). Moreover, the provisions of subpart 2 “will [also] continue to apply as a matter of law for so long as an area is not attaining the [old] 1-hour standard.” *Id.*, at 38873. Once the area reaches attainment for the old standard, however, “the provisions of subpart 2 will have been achieved and those provisions will no longer apply.” *Ibid.*; see also *id.*, at 38884–38885.

We have little trouble concluding that this constitutes final agency action subject to review under §307. The bite in the phrase “final action” (which bears the same meaning in §307(b)(1) that it does under the Administrative Procedure Act (APA), 5 U. S. C. §704, see *Harrison v. PPG Industries, Inc.*, 446 U. S. 578, 586 (1980)), is not in the word “action,” which is meant to cover comprehensively every manner in which an agency may exercise its power. See *FTC v. Standard Oil Co. of Cal.*, 449 U. S. 232, 238, n. 7 (1980). It is rather in the word “final,” which requires that the action under review “mark the consummation of the agency’s decisionmaking process.” *Bennett v. Spear*, 520 U. S. 154, 177–178 (1997). Only if the “EPA has rendered its last word on the matter” in question, *Harrison v. PPG Industries, Inc.*, *supra*, at 586, is its action “final” and thus reviewable. That standard is satisfied here. The EPA’s “decision-making process,” which began with the 1996 proposal and continued with the reception of public comments, concluded

Opinion of the Court

when the agency, “in light of [these comments],” and in conjunction with a corresponding directive from the White House, adopted the interpretation of Part D at issue here. Since that interpretation issued, the EPA has refused in subsequent rulemakings to reconsider it, explaining to disappointed commenters that its earlier decision was conclusive. See 63 Fed. Reg. 31014, 31018–31019 (1998). Though the agency has not dressed its decision with the conventional procedural accoutrements of finality, its own behavior thus belies the claim that its interpretation is not final.

The decision is also ripe for our review. “Ripeness ‘require[s] us to evaluate both the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration.’” *Texas v. United States*, 523 U. S. 296, 300–301 (1998) (quoting *Abbott Laboratories v. Gardner*, 387 U. S. 136, 149 (1967)). The question before us here is purely one of statutory interpretation that would not “benefit from further factual development of the issues presented.” *Ohio Forestry Assn., Inc. v. Sierra Club*, 523 U. S. 726, 733 (1998). Nor will our review “inappropriately interfere with further administrative action,” *ibid.*, since the EPA has concluded its consideration of the implementation issue. Finally, as for hardship to the parties: The respondent States must—on pain of forfeiting to the EPA control over implementation of the NAAQS—promptly undertake the lengthy and expensive task of developing state implementation plans (SIP’s) that will attain the new, more stringent standard within five years. See 42 U. S. C. §§ 7410, 7502. Whether or not this would suffice in an ordinary case brought under the review provisions of the APA, see 5 U. S. C. § 704, we have characterized the special judicial-review provision of the CAA, 42 U. S. C. § 7607(b), as one of those statutes that specifically provides for “preenforcement” review, see *Ohio Forestry Assn., Inc. v. Sierra Club*, *supra*, at 737. Such statutes, we have said, permit “judicial review directly, even before the

Opinion of the Court

concrete effects normally required for APA review are felt.” *Lujan v. National Wildlife Federation*, 497 U.S. 871, 891 (1990). The effects at issue here surely meet that lower standard.

Beyond all this, the implementation issue was fairly included within the challenges to the final ozone rule that were properly before the Court of Appeals. Respondents argued below that the EPA could not revise the ozone standard, because to do so would trigger the use of Subpart 1, which had been supplanted (for ozone) by the specific rules of Subpart 2. Brief for Industry Petitioners and Intervenors in No. 97–1441 (and consolidated cases) (CADDC), pp. 32–34. The EPA responded that Subpart 2 did not supplant but simply supplemented Subpart 1, so that the latter section still “applies to all nonattainment areas for all NAAQS, . . . including nonattainment areas for any revised ozone standard.” Final Brief for EPA in No. 97–1441 (and consolidated cases) (CADDC), pp. 67–68. The agency later reiterated that Subpart 2 “does not supplant implementation provisions for revised ozone standards. This interpretation fully harmonizes Subpart 2 with EPA’s clear authority to revise any NAAQS.” *Id.*, at 71. In other words, the EPA was arguing that the revised standard could be issued, despite its apparent incompatibility with portions of Subpart 2, *because it would be implemented under Subpart 1 rather than Subpart 2*. The District of Columbia Circuit ultimately agreed that Subpart 2 could be harmonized with the EPA’s authority to promulgate revised NAAQS, but *not* because Subpart 2 is entirely inapplicable—which is one of EPA’s assignments of error. It is unreasonable to contend, as the EPA now does, that the Court of Appeals was obligated to reach the agency’s preferred result, but forbidden to assess the reasons the EPA had given for reaching that result. The implementation issue was fairly included within respondents’ challenge to the ozone rule, which all parties agree is final agency action ripe for review.

Opinion of the Court

B

Our approach to the merits of the parties' dispute is the familiar one of *Chevron U. S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U. S. 837 (1984). If the statute resolves the question whether Subpart 1 or Subpart 2 (or some combination of the two) shall apply to revised ozone NAAQS, then "that is the end of the matter." *Id.*, at 842–843. But if the statute is "silent or ambiguous" with respect to the issue, then we must defer to a "reasonable interpretation made by the administrator of an agency." *Id.*, at 844. We cannot agree with the Court of Appeals that Subpart 2 clearly controls the implementation of revised ozone NAAQS, see 175 F. 3d, at 1048–1050, because we find the statute to some extent ambiguous. We conclude, however, that the agency's interpretation goes beyond the limits of what is ambiguous and contradicts what in our view is quite clear. We therefore hold the implementation policy unlawful. See *AT&T Corp. v. Iowa Utilities Bd.*, 525 U. S. 366, 392 (1999).

The text of Subpart 1 at first seems to point the way to a clear answer to the question, which Subpart controls? Two sections of Subpart 1, 7502(a)(1)(C) and 7502(a)(2)(D), contain switching provisions stating that if the classification of ozone nonattainment areas is "specifically provided [for] under other provisions of [Part D]," then those provisions will control instead of Subpart 1's. Thus, it is true but incomplete to note, as the Administrator does, that the substantive language of Subpart 1 is broad enough to apply to revised ozone standards. See, *e. g.*, § 7502(a)(1)(A) (instructing the Administrator to classify nonattainment areas according to "any revised standard, including a revision of any standard in effect on November 15, 1990"); § 7502(a)(2)(A) (setting attainment deadlines). To determine whether that language *does* apply one must resolve the further textual issue whether some *other* provision, namely Subpart 2, provides for the classification of ozone nonattainment areas. If

Opinion of the Court

it does, then according to the switching provisions of Subpart 1 it will control.

So, does Subpart 2 provide for classifying nonattainment ozone areas under the revised standard? It unquestionably does. The backbone of the subpart is Table 1, printed in § 7511(a)(1) and reproduced in the margin here,⁵ which defines five categories of ozone nonattainment areas and prescribes attainment deadlines for each. Section 7511(a)(1) funnels all nonattainment areas into the table for classification, declaring that “[e]ach area designated nonattainment for ozone . . . shall be classified at the time of such designation, under table 1, by operation of law.” And once an area has been classified, “the primary standard attainment date for ozone shall be as expeditiously as practicable but not later than the date provided in table 1.” The EPA argues that this text is not as clear or comprehensive as it seems, because the title of § 7511(a) reads “Classification and attainment dates for 1989 nonattainment areas,” which suggests that Subpart 2 applies only to areas that were in nonattainment in 1989, and not to areas later designated non-

⁵

TABLE 1

Area class	Design value*	Primary standard attainment date**
Marginal	0.121 up to 0.138	3 years after November 15, 1990
Moderate.....	0.138 up to 0.160	6 years after November 15, 1990
Serious	0.160 up to 0.180	9 years after November 15, 1990
Severe	0.180 up to 0.280	15 years after November 15, 1990
Extreme.....	0.280 and above	20 years after November 15, 1990

*The design value is measured in parts per million (ppm).

**The primary standard attainment date is measured from November 15, 1990.

Opinion of the Court

attainment under a revised ozone standard. The suggestion must be rejected, however, because §7511(b)(1) specifically provides for the classification of areas that *were* in attainment in 1989 but have subsequently slipped into nonattainment. It thus makes clear that Subpart 2 is *not* limited solely to 1989 nonattainment areas. This eliminates the interpretive role of the title, which may only “she[d] light on some ambiguous word or phrase in the statute itself,” *Carter v. United States*, 530 U. S. 255, 267 (2000) (internal quotation marks omitted) (quoting *Pennsylvania Dept. of Corrections v. Yeskey*, 524 U. S., at 212, in turn quoting *Trainmen v. Baltimore & Ohio R. Co.*, 331 U. S. 519, 528–529 (1947)).

It may well be, as the EPA argues—and as the concurring opinion below on denial of rehearing pointed out, see 195 F. 3d, at 11–12—that some provisions of Subpart 2 are ill fitted to implementation of the revised standard. Using the old 1-hour averages of ozone levels, for example, as Subpart 2 requires, see §7511(a)(1); 44 Fed. Reg. 8202 (1979), would produce at best an inexact estimate of the new 8-hour averages, see 40 CFR §50.10, and App. I (1999). Also, to the extent that the new ozone standard is stricter than the old one, see Reply Brief for Petitioners in No. 99–1257, p. 17 (“the stricter 8-hour NAAQS”); 62 Fed. Reg. 38856, 38858 (1997) (8-hour standard of 0.09 ppm rather than 0.08 ppm would have “generally represent[ed] the continuation of the [old] level of protection”), the classification system of Subpart 2 contains a gap, because it fails to classify areas whose ozone levels are greater than the new standard (and thus nonattaining) but less than the approximation of the old standard codified by Table 1. And finally, Subpart 2’s method for calculating attainment dates—which is simply to count forward a certain number of years from November 15, 1990 (the date the 1990 CAA Amendments took force), depending on how far out of attainment the area started—seems to make no sense for areas that are first classified under a new standard after November 15, 1990.

Opinion of the Court

If, for example, areas were classified in the year 2000, many of the deadlines would already have expired at the time of classification.

These gaps in Subpart 2's scheme prevent us from concluding that Congress clearly intended Subpart 2 to be the exclusive, permanent means of enforcing a revised ozone standard in nonattainment areas. The statute is in our view ambiguous concerning the manner in which Subpart 1 and Subpart 2 interact with regard to revised ozone standards, and we would defer to the EPA's reasonable resolution of that ambiguity. See *FDA v. Brown & Williamson Tobacco Corp.*, 529 U. S., at 132; *INS v. Aguirre-Aguirre*, 526 U. S. 415, 424 (1999). We cannot defer, however, to the interpretation the EPA has given.

Whatever effect may be accorded the gaps in Subpart 2 as implying some limited applicability of Subpart 1, they cannot be thought to render Subpart 2's carefully designed restrictions on EPA discretion utterly nugatory once a new standard has been promulgated, as the EPA has concluded. The principal distinction between Subpart 1 and Subpart 2 is that the latter eliminates regulatory discretion that the former allowed. While Subpart 1 permits the EPA to establish classifications for nonattainment areas, Subpart 2 classifies areas as a matter of law based on a table. Compare § 7502(a)(1) with § 7511(a)(1) (Table 1). Whereas the EPA has discretion under Subpart 1 to extend attainment dates for as long as 12 years, under Subpart 2 it may grant no more than 2 years' extension. Compare §§ 7502(a)(2)(A) and (C) with § 7511(a)(5). Whereas Subpart 1 gives the EPA considerable discretion to shape nonattainment programs, Subpart 2 prescribes large parts of them by law. Compare §§ 7502(c) and (d) with § 7511a. Yet according to the EPA, Subpart 2 was simply Congress's "approach to the implementation of the [old] 1-hour" standard, and so there was no reason that "the new standard could not simultaneously be implemented under . . . subpart 1." 62 Fed. Reg.

Opinion of the Court

38856, 38885 (1997); see also *id.*, at 38873 (“[T]he provisions of subpart 1 . . . would apply to the implementation of the new 8-hour ozone standards”). To use a few apparent gaps in Subpart 2 to render its textually explicit applicability to nonattainment areas under the new standard utterly inoperative is to go over the edge of reasonable interpretation. The EPA may not construe the statute in a way that completely nullifies textually applicable provisions meant to limit its discretion.

The EPA’s interpretation making Subpart 2 abruptly obsolete is all the more astonishing because Subpart 2 was obviously written to govern implementation for some time. Some of the elements required to be included in SIP’s under Subpart 2 were not to take effect until many years after the passage of the CAA. See § 7511a(e)(3) (restrictions on “electric utility and industrial and commercial boiler[s]” to be “effective 8 years after November 15, 1990”); § 7511a(c)(5)(A) (vehicle monitoring program to “[b]egi[n] 6 years after November 15, 1990”); § 7511a(g)(1) (emissions milestone requirements to be applied “6 years after November 15, 1990, and at intervals of every 3 years thereafter”). A plan reaching so far into the future was not enacted to be abandoned the next time the EPA reviewed the ozone standard—which Congress knew could happen at any time, since the technical staff papers had already been completed in late 1989. See 58 Fed. Reg. 13008, 13010 (1993); see also 42 U. S. C. § 7409(d)(1) (NAAQS must be reviewed and, if appropriate, revised at least once every five years). Yet nothing in the EPA’s interpretation would have prevented the agency from aborting Subpart 2 the day after it was enacted. Even now, if the EPA’s interpretation were correct, some areas of the country could be required to meet the new, more stringent ozone standard in *at most* the same time that Subpart 2 had allowed them to meet the old standard. Compare § 7502(a)(2) (Subpart 1 attainment dates) with § 7511(a) (Subpart 2 attainment dates). Los Angeles, for instance, “would

THOMAS, J., concurring

be required to attain the revised NAAQS under Subpart 1 no later than the same year that marks the outer time limit for attaining Subpart 2's one-hour ozone standard." Brief for Petitioners in No. 99-1257, p. 49. An interpretation of Subpart 2 so at odds with its structure and manifest purpose cannot be sustained.

We therefore find the EPA's implementation policy to be unlawful, though not in the precise respect determined by the Court of Appeals. After our remand, and the Court of Appeals' final disposition of these cases, it is left to the EPA to develop a reasonable interpretation of the nonattainment implementation provisions insofar as they apply to revised ozone NAAQS.

* * *

To summarize our holdings in these unusually complex cases: (1) The EPA may not consider implementation costs in setting primary and secondary NAAQS under § 109(b) of the CAA. (2) Section 109(b)(1) does not delegate legislative power to the EPA in contravention of Art. I, § 1, of the Constitution. (3) The Court of Appeals had jurisdiction to review the EPA's interpretation of Part D of Title I of the CAA, relating to the implementation of the revised ozone NAAQS. (4) The EPA's interpretation of that Part is unreasonable.

The judgment of the Court of Appeals is affirmed in part and reversed in part, and the cases are remanded for proceedings consistent with this opinion.

It is so ordered.

JUSTICE THOMAS, concurring.

I agree with the majority that § 109's directive to the agency is no less an "intelligible principle" than a host of other directives that we have approved. *Ante*, at 474-476. I also agree that the Court of Appeals' remand to the agency to make its own corrective interpretation does not accord with our understanding of the delegation issue. *Ante*, at 472-473. I write separately, however, to express my con-

Opinion of STEVENS, J.

cern that there may nevertheless be a genuine constitutional problem with §109, a problem which the parties did not address.

The parties to these cases who briefed the constitutional issue wrangled over constitutional doctrine with barely a nod to the text of the Constitution. Although this Court since 1928 has treated the “intelligible principle” requirement as the only constitutional limit on congressional grants of power to administrative agencies, see *J. W. Hampton, Jr., & Co. v. United States*, 276 U. S. 394, 409 (1928), the Constitution does not speak of “intelligible principles.” Rather, it speaks in much simpler terms: “All legislative Powers herein granted shall be vested in a Congress.” U. S. Const., Art. 1, §1 (emphasis added). I am not convinced that the intelligible principle doctrine serves to prevent all cessions of legislative power. I believe that there are cases in which the principle is intelligible and yet the significance of the delegated decision is simply too great for the decision to be called anything other than “legislative.”

As it is, none of the parties to these cases has examined the text of the Constitution or asked us to reconsider our precedents on cessions of legislative power. On a future day, however, I would be willing to address the question whether our delegation jurisprudence has strayed too far from our Founders’ understanding of separation of powers.

JUSTICE STEVENS, with whom JUSTICE SOUTER joins, concurring in part and concurring in the judgment.

Section 109(b)(1) delegates to the Administrator of the Environmental Protection Agency (EPA) the authority to promulgate national ambient air quality standards (NAAQS). In Part III of its opinion, *ante*, at 472–476, the Court convincingly explains why the Court of Appeals erred when it concluded that §109 effected “an unconstitutional delegation of legislative power.” *American Trucking Assns., Inc. v. EPA*, 175 F. 3d 1027, 1033 (CADC 1999) (*per curiam*).

Opinion of STEVENS, J.

I wholeheartedly endorse the Court's result and endorse its explanation of its reasons, albeit with the following caveat.

The Court has two choices. We could choose to articulate our ultimate disposition of this issue by frankly acknowledging that the power delegated to the EPA is "legislative" but nevertheless conclude that the delegation is constitutional because adequately limited by the terms of the authorizing statute. Alternatively, we could pretend, as the Court does, that the authority delegated to the EPA is somehow not "legislative power." Despite the fact that there is language in our opinions that supports the Court's articulation of our holding,¹ I am persuaded that it would be both wiser and more faithful to what we have actually done in delegation cases to admit that agency rulemaking authority is "legislative power."²

The proper characterization of governmental power should generally depend on the nature of the power, not on the identity of the person exercising it. See Black's Law Dictionary 899 (6th ed. 1990) (defining "legislation" as, *inter alia*, "[f]ormulation of rule[s] for the future"); 1 K. Davis & R. Pierce, *Administrative Law Treatise* §2.3, p. 37 (3d ed. 1994) ("If legislative power means the power to make rules of conduct that bind everyone based on resolution of major policy issues, scores of agencies exercise legislative power routinely by

¹See, e.g., *Touby v. United States*, 500 U.S. 160, 165 (1991); *United States v. Shreveport Grain & Elevator Co.*, 287 U.S. 77, 85 (1932); *J. W. Hampton, Jr., & Co. v. United States*, 276 U.S. 394, 407 (1928); *Field v. Clark*, 143 U.S. 649, 692 (1892).

²See *Mistretta v. United States*, 488 U.S. 361, 372 (1989) ("[O]ur jurisprudence has been driven by a practical understanding that in our increasingly complex society . . . Congress simply cannot do its job absent an ability to delegate power . . ."). See also *Loving v. United States*, 517 U.S. 748, 758 (1996) ("[The nondelegation] principle does not mean . . . that only Congress can make a rule of prospective force"); 1 K. Davis & R. Pierce, *Administrative Law Treatise* §2.6, p. 66 (3d ed. 1994) ("Except for two 1935 cases, the Court has never enforced its frequently announced prohibition on congressional delegation of legislative power").

Opinion of STEVENS, J.

promulgating what are candidly called ‘legislative rules’”). If the NAAQS that the EPA promulgated had been prescribed by Congress, everyone would agree that those rules would be the product of an exercise of “legislative power.” The same characterization is appropriate when an agency exercises rulemaking authority pursuant to a permissible delegation from Congress.

My view is not only more faithful to normal English usage, but is also fully consistent with the text of the Constitution. In Article I, the Framers vested “All legislative Powers” in the Congress, Art. I, § 1, just as in Article II they vested the “executive Power” in the President, Art. II, § 1. Those provisions do not purport to limit the authority of either recipient of power to delegate authority to others. See *Bowsher v. Synar*, 478 U. S. 714, 752 (1986) (STEVENS, J., concurring in judgment) (“Despite the statement in Article I of the Constitution that ‘All legislative powers herein granted shall be vested in a Congress of the United States,’ it is far from novel to acknowledge that independent agencies do indeed exercise legislative powers”); *INS v. Chadha*, 462 U. S. 919, 985–986 (1983) (White, J., dissenting) (“[L]egislative power can be exercised by independent agencies and Executive departments . . .”); 1 Davis & Pierce, *Administrative Law Treatise* § 2.6, at 66 (“The Court was probably mistaken from the outset in interpreting Article I’s grant of power to Congress as an implicit limit on Congress’ authority to delegate legislative power”). Surely the authority granted to members of the Cabinet and federal law enforcement agents is properly characterized as “Executive” even though not exercised by the President. Cf. *Morrison v. Olson*, 487 U. S. 654, 705–706 (1988) (SCALIA, J., dissenting) (arguing that the independent counsel exercised “executive power” unconstrained by the President).

It seems clear that an executive agency’s exercise of rulemaking authority pursuant to a valid delegation from Congress is “legislative.” As long as the delegation provides a

Opinion of BREYER, J.

sufficiently intelligible principle, there is nothing inherently unconstitutional about it. Accordingly, while I join Parts I, II, and IV of the Court's opinion, and agree with almost everything said in Part III, I would hold that when Congress enacted § 109, it effected a constitutional delegation of legislative power to the EPA.

JUSTICE BREYER, concurring in part and concurring in the judgment.

I join Parts I, III, and IV of the Court's opinion. I also agree with the Court's determination in Part II that the Clean Air Act does not permit the Environmental Protection Agency to consider the economic costs of implementation when setting national ambient air quality standards under § 109(b)(1) of the Act. But I would not rest this conclusion solely upon § 109's language or upon a presumption, such as the Court's presumption that any authority the Act grants the EPA to consider costs must flow from a "textual commitment" that is "clear." *Ante*, at 468. In order better to achieve regulatory goals—for example, to allocate resources so that they save more lives or produce a cleaner environment—regulators must often take account of all of a proposed regulation's adverse effects, at least where those adverse effects clearly threaten serious and disproportionate public harm. Hence, I believe that, other things being equal, we should read silences or ambiguities in the language of regulatory statutes as permitting, not forbidding, this type of rational regulation.

In these cases, however, other things are not equal. Here, legislative history, along with the statute's structure, indicates that § 109's language reflects a congressional decision not to delegate to the agency the legal authority to consider economic costs of compliance.

For one thing, the legislative history shows that Congress intended the statute to be "technology forcing." Senator Edmund Muskie, the primary sponsor of the 1970 amend-

Opinion of BREYER, J.

ments to the Act, introduced them by saying that Congress' primary responsibility in drafting the Act was not "to be limited by what is or appears to be technologically or economically feasible," but "to establish what the public interest requires to protect the health of persons," even if that means that "*industries will be asked to do what seems to be impossible at the present time.*" 116 Cong. Rec. 32901–32902 (1970), 1 Legislative History of the Clean Air Amendments of 1970 (Committee Print compiled for the Senate Committee on Public Works by the Library of Congress), Ser. No. 93–18, p. 227 (1974) (hereinafter Leg. Hist.) (emphasis added).

The Senate directly focused upon the technical feasibility and cost of implementing the Act's mandates. And it made clear that it intended the Administrator to develop air quality standards set independently of either. The Senate Report for the 1970 amendments explains:

"In the Committee discussions, considerable concern was expressed regarding the use of the concept of technical feasibility as the basis of ambient air standards. The Committee determined that 1) *the health of people is more important than the question of whether the early achievement of ambient air quality standards protective of health is technically feasible*; and, 2) the growth of pollution load in many areas, even with application of available technology, would still be deleterious to public health. . . .

"Therefore, the Committee determined that *existing sources of pollutants either should meet the standard of the law or be closed down . . .*" S. Rep. No. 91–1196, pp. 2–3 (1970), 1 Leg. Hist. 402–403 (emphasis added).

Indeed, this Court, after reviewing the entire legislative history, concluded that the 1970 amendments were "expressly designed to force regulated sources to develop pollution control devices that *might at the time appear to be economically or technologically infeasible.*" *Union Elec. Co.*

Opinion of BREYER, J.

v. EPA, 427 U. S. 246, 257 (1976) (emphasis added). And the Court added that the 1970 amendments were intended to be a “drastic remedy to . . . a serious and otherwise uncheckable problem.” *Id.*, at 256. Subsequent legislative history confirms that the technology-forcing goals of the 1970 amendments are still paramount in today’s Act. See Clean Air Conference Report (1977): Statement of Intent; Clarification of Select Provisions, 123 Cong. Rec. 27070 (1977) (stating, regarding the 1977 amendments to the Act, that “this year’s legislation retains and even strengthens the technology forcing . . . goals of the 1970 Act”); S. Rep. No. 101–228, p. 5 (1989) (stating that the 1990 amendments to the Act require ambient air quality standards to be set at “the level that ‘protects the public health’ with an ‘adequate margin of safety,’ *without regard to the economic or technical feasibility of attainment*” (emphasis added)).

To read this legislative history as meaning what it says does not impute to Congress an irrational intent. Technology-forcing hopes can prove realistic. Those persons, for example, who opposed the 1970 Act’s insistence on a 90% reduction in auto emission pollutants, on the ground of excessive cost, saw the development of catalytic converter technology that helped achieve substantial reductions without the economic catastrophe that some had feared. See § 6(a) of the Clean Air Act Amendments of 1970, amending §§ 202(b)(1)(A), (B), 84 Stat. 1690 (codified at 42 U.S.C. §§ 7521(b)(1)(A), (B)) (requiring a 90% reduction in emissions); 1 Leg. Hist. 238, 240 (statement of Sen. Griffin) (arguing that the emissions standards could “force [the automobile] industry out of existence” because costs “would not be taken into account”); see generally Reitze, *Mobile Source Air Pollution Control*, 6 *Env. Law.* 309, 326–327 (2000) (discussing the development of the catalytic converter).

At the same time, the statute’s technology-forcing objective makes regulatory efforts to determine the costs of implementation both less important and more difficult. It

Opinion of BREYER, J.

means that the relevant economic costs are speculative, for they include the cost of unknown future technologies. It also means that efforts to take costs into account can breed time-consuming and potentially unresolvable arguments about the accuracy and significance of cost estimates. Congress could have thought such efforts not worth the delays and uncertainties that would accompany them. In any event, that is what the statute's history seems to say. See *Union Elec.*, *supra*, at 256–259. And the matter is one for Congress to decide.

Moreover, the Act does not, on this reading, wholly ignore cost and feasibility. As the majority points out, *ante*, at 466–467, the Act allows regulators to take those concerns into account when they determine how to implement ambient air quality standards. Thus, States may consider economic costs when they select the particular control devices used to meet the standards, and industries experiencing difficulty in reducing their emissions can seek an exemption or variance from the state implementation plan. See *Union Elec.*, *supra*, at 266 (“[T]he most important forum for consideration of claims of economic and technological infeasibility is before the state agency formulating the implementation plan”).

The Act also permits the EPA, within certain limits, to consider costs when it sets deadlines by which areas must attain the ambient air quality standards. 42 U. S. C. § 7502(a)(2)(A) (providing that “the Administrator may extend the attainment date . . . for a period no greater than 10 years from the date of designation as nonattainment, considering the severity of nonattainment and the availability and feasibility of pollution control measures”); § 7502(a)(2)(C) (permitting the Administrator to grant up to two additional 1-year extensions); cf. §§ 7511(a)(1), (5) (setting more rigid attainment deadlines for areas in nonattainment of the ozone standard, but permitting the Administrator to grant up to two 1-year extensions). And Congress can change those statutory limits if necessary. Given the ambient air quality

Opinion of BREYER, J.

standards' substantial effects on States, cities, industries, and their suppliers and customers, Congress will hear from those whom compliance deadlines affect adversely, and Congress can consider whether legislative change is warranted. See, e. g., Steel Industry Compliance Extension Act of 1981, 95 Stat. 139 (codified at 42 U. S. C. § 7413(e) (1988 ed.)) (repealed 1990) (granting the Administrator discretion to extend the ambient air quality standard attainment date set in the 1977 Act by up to three years for steelmaking facilities).

Finally, contrary to the suggestion of the Court of Appeals and of some parties, this interpretation of § 109 does not require the EPA to eliminate every health risk, however slight, at any economic cost, however great, to the point of “hurtling” industry over “the brink of ruin,” or even forcing “deindustrialization.” *American Trucking Assns., Inc. v. EPA*, 175 F. 3d 1027, 1037, 1038, n. 4 (CA DC 1999); see also Brief for Cross-Petitioners in No. 99–1426, p. 25. The statute, by its express terms, does not compel the elimination of *all* risk; and it grants the Administrator sufficient flexibility to avoid setting ambient air quality standards ruinous to industry.

Section 109(b)(1) directs the Administrator to set standards that are “requisite to protect the public health” with “an adequate margin of safety.” But these words do not describe a world that is free of all risk—an impossible and undesirable objective. See *Industrial Union Dept., AFL–CIO v. American Petroleum Institute*, 448 U. S. 607, 642 (1980) (plurality opinion) (the word “safe” does not mean “risk-free”). Nor are the words “requisite” and “public health” to be understood independent of context. We consider football equipment “safe” even if its use entails a level of risk that would make drinking water “unsafe” for consumption. And what counts as “requisite” to protecting the public health will similarly vary with background circumstances, such as the public’s ordinary tolerance of the particular health risk in the particular context at issue. The Administrator can

Opinion of BREYER, J.

consider such background circumstances when “decid[ing] what risks are acceptable in the world in which we live.” *Natural Resources Defense Council, Inc. v. EPA*, 824 F. 2d 1146, 1165 (CA DC 1987).

The statute also permits the Administrator to take account of comparative health risks. That is to say, she may consider whether a proposed rule promotes safety overall. A rule likely to cause more harm to health than it prevents is not a rule that is “requisite to protect the public health.” For example, as the Court of Appeals held and the parties do not contest, the Administrator has the authority to determine to what extent possible health risks stemming from reductions in tropospheric ozone (which, it is claimed, helps prevent cataracts and skin cancer) should be taken into account in setting the ambient air quality standard for ozone. See 175 F. 3d, at 1050–1053 (remanding for the Administrator to make that determination).

The statute ultimately specifies that the standard set must be “requisite to protect the public health” “*in the judgment of the Administrator*,” § 109(b)(1), 84 Stat. 1680 (emphasis added), a phrase that grants the Administrator considerable discretionary standard-setting authority.

The statute’s words, then, authorize the Administrator to consider the severity of a pollutant’s potential adverse health effects, the number of those likely to be affected, the distribution of the adverse effects, and the uncertainties surrounding each estimate. Cf. Sunstein, *Is the Clean Air Act Unconstitutional?*, 98 Mich. L. Rev. 303, 364 (1999). They permit the Administrator to take account of comparative health consequences. They allow her to take account of context when determining the acceptability of small risks to health. And they give her considerable discretion when she does so.

This discretion would seem sufficient to avoid the extreme results that some of the industry parties fear. After all, the EPA, in setting standards that “protect the public health”

Opinion of BREYER, J.

with “an adequate margin of safety,” retains discretionary authority to avoid regulating risks that it reasonably concludes are trivial in context. Nor need regulation lead to deindustrialization. Preindustrial society was not a very healthy society; hence a standard demanding the return of the Stone Age would not prove “requisite to protect the public health.”

Although I rely more heavily than does the Court upon legislative history and alternative sources of statutory flexibility, I reach the same ultimate conclusion. Section 109 does not delegate to the EPA authority to base the national ambient air quality standards, in whole or in part, upon the economic costs of compliance.
